## Mico - Dual Channel Mic Pre with HMX and Variphase

Many smaller studios rely on their interface's mic pres and A/D converters to provide the signal path for this critical stage of the recording process. With the addition of a Mico the limiting factor of your interface can be bypassed using Audient's renowned mic pres and converters.

### Great recordings - made simple

Mico features two channels of Audient's discrete, Class A Mic pre combined with a pair of ultra-high quality ADCs with AES and SPDIF outputs. The first channel features Audient's unique HMX harmonic sculpting technology – allowing you to add vintage style character and complexity to your signal path. The Variphase function allows creative control of the phase relationship between the two channels, allowing for fine tuning of dual mic and mic plus DI configurations.

Examples of Variphase in use with dual mic techniques

Discrete Class A Design

AES/SPDF Digital Output

HMX Harmonic Sculpting

Variphase
